## TS ODBC DataServer™ 8.6.0

1. Selection Criteria report may fail with an error 47. The report will run from an IDOL-IV™ menu by entering *.odrSELCR* at the menu prompt.
2. An error accessing data may occur when using the Single-Tier product while a Basic 8.4.0 window is open. Closing the Basic window will eliminate the problem.
3. Under some conditions, in the NT Server Multiple-Tier environment, error messages may appear garbled or blank.
4. An attempt to change the default port may fail.
5. SQL statements utilizing a BETWEEN clause in WHERE statements may result in lengthy processing time. As a workaround, use <= and >= with an AND statement. For example:

```
WHERE CUST_CODE IS BETWEEN "0001" AND "0009"
```

replace with:

```
WHERE CUST_CODE >= "0001" AND CUST_CODE <= "0009"
```

6. NOT BETWEEN is not functioning as specified. Use the following statement as a workaround:

```
WHERE CUST_CODE IS NOT BETWEEN "0004" AND "0006"
```

replace with:

```
WHERE CUST_CODE < "0004" OR CUST_CODE > "0006"
```
